

Empowering Secure Transactions Beyond Connectivity

Decentralized Wallet. Freedom Powered by Offline.

Offline is the most disruptive technology of our time, serving as the missing link between quantum, AI, and global adoption.

— Andrew Cha, Founder of Pure Wallet & Pure Chain

As quantum and AI accelerate and Web3 reshapes the internet, one thing is clear: the future needs protection. Pure Wallet and Pure Chain deliver secure, decentralized, offline infrastructure — the foundation that enables true privacy, trust, and real-world integration. In a world where constant connectivity means constant risk, offline technology becomes the key to stability, security, and responsible growth across quantum, AI, and Web3.

WHY PURE WALLET

Crypto & Stablecoins Still Depend on Centralized Payments

Despite being decentralized in theory, most cryptocurrencies and stablecoins still depend on centralized payment infrastructure.

THE STRUCTURAL PROBLEMS

High Fees

Designed for P2P, but gas fees make USDT and USDC hard to use for micro transactions.

No Real-Time

High demand slows public chains, disrupting micro transactions and daily use.

Central Reliance

USDT and USDC were built for P2P, but now sit in exchanges as trading assets, with lost accessibility and control.

OFFLINE WALLET COMPARISON

	Non-Repudiation	Encryption of Private Key	Offline Transaction	Gas Fee	TPS	Untraceable Transaction History
 Pure Wallet Offline Wallet	✓	AES-256	✓	Free	Unlimited	✓
 Pure Wallet Hot Wallet	✗	AES-128	✗	Pay-to-Use	Up to Network	✗
METAMASK	✗	AES-128	✗	Pay-to-Use	Up to Network	✗
SafePal	✗	AES-128	✗	Pay-to-Use	Up to Network	✗
coinbase	✗	AES-128	✗	Pay-to-Use	Up to Network	✗

The World's First ISO-Certified Offline Blockchain Wallet

All-In-One Crypto Wallet with Hot, Cold, and Offline Modes

SOLVED BY PURE WALLET

Zero Gas Fees

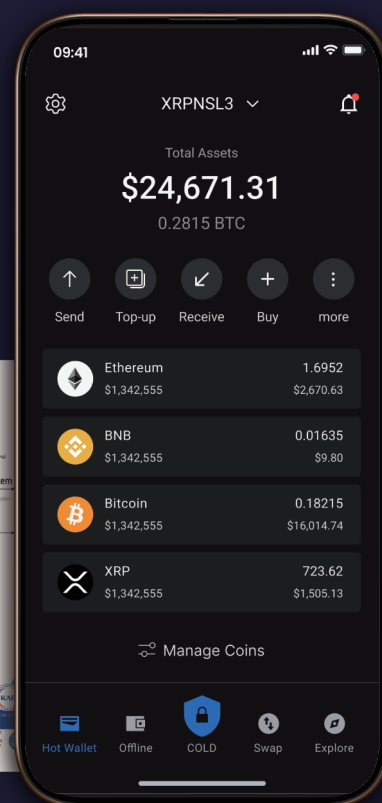

Pure Wallet eliminates gas fees, allowing users to make micro transactions freely and efficiently.

No Internet Needed

Enables secure signing and approval without internet, allowing stablecoin use without delays or connectivity.

Decentralized

Pure Wallet enables full asset control through P2P transfers, eliminating exchange dependency and restoring stablecoins as real, usable currency.

COLD WALLET COMPARISON

	Offline Transaction	Security Level	Minimum Access Requirement	Add-on Required	Gas Fee	Price	Security Feature
 Pure Wallet	Possible	128 x n (number of tokens)	Private Key + User Device	H/W not Needed	Free	\$39.95	PQC and AI
 LEDGER	N/A	128	Private Key	Hardware Required	Pay-to-Use	\$270	BOLOS
 TREZOR	N/A	128	Private Key	Hardware Required	Pay-to-Use	\$169	Open Source
 BitBox	N/A	128	Private Key	Hardware Required	Pay-to-Use	\$120	Password, SD card
Coinkite	N/A	128	Private Key	Hardware Required	Pay-to-Use	\$219.99	SD card

Blockchain Ecosystem of Pure Series

Pure Chain is the technological backbone of the Pure Series, providing security, autonomy, and offline functionality across all products.

The World's First Auto-Mining Blockchain

Unveiling SAM⁺ : The Future of Blockchain begins with Pure Chain

On October 28, 2025, Pure Chain will launch SAM⁺ the world's first auto-mining blockchain built into Pure Wallet.

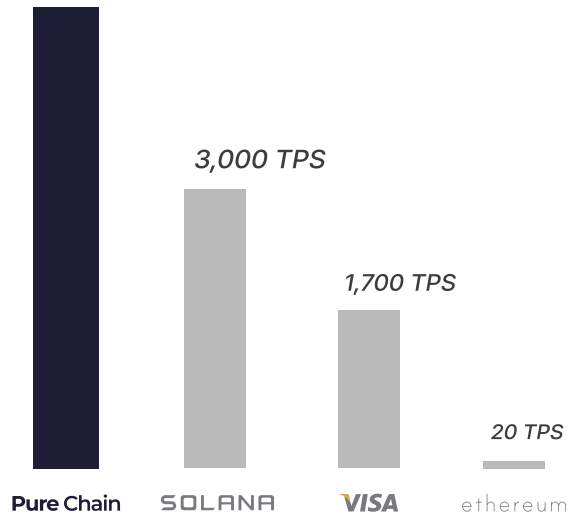

Debuting at Blockchain Life 2025 in Dubai, it marks a new era in sustainable, self-operating blockchain technology.

AI Quantum-Secured Auto-Mining Blockchain System Powered by PoA²

Pure Chain Makes Offline Transactions Lightning-Fast

UNLIMITED TPS

Network Independent

Smart Auto Mining⁺ (SAM⁺)

Energy-efficient mining technique that shortens transaction time and lowers power consumption.

Proof of Authority² (PoA²)

AI-driven infrastructure that keeps the network stable and efficient, even during mining interruptions.

Augmented Layer 1

SAM⁺ and PoA² layer that improves Layer 1 blockchain efficiency and reliability.

NSL Layer 2 (NLS-L2)

ZK-Rollup with SAM⁺ and PoA² boosts scalability and cuts gas fees.

Centralized Layer 2 (nsl-cl2)

An industry-focused Layer 2 solution optimized for scalability, security, and offline execution.

Blockchain Security for Defense Test Report, LIG Nex1 Deployed

LIG Nex1

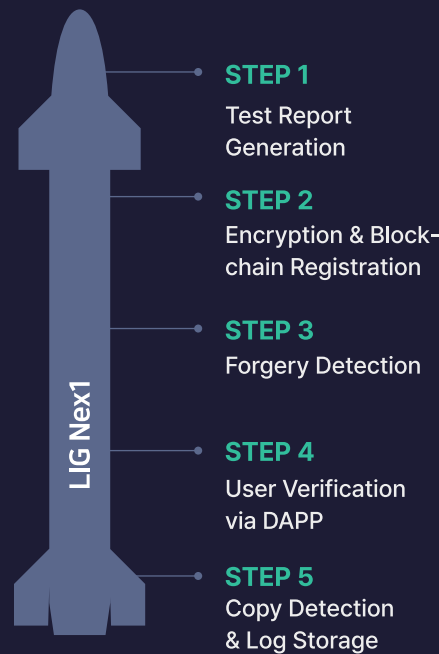

LIG Nex1 is a leading South Korean defense company specializing in advanced weapon systems, electronics, and defense technologies.

Tamper-Proof & Forgery Detection

Protects documents from tampering and detects visual forgeries with blockchain and AI-based validation.

Offline Military-Grade Verification

Securely verifies data integrity without internet, providing robust protection for defense and high-security environments.

Pure Certificate Solution

- Blockchain-Based Digital Certification System
- DoD-Level Integrity Assurance
- System-Independent Architecture
- Encrypted & Decentralized Data Storage
- Perceptual Hash-Based Forgery Detection
- Smart Contract-Driven Auto Verification

Proven Deployment

- Successfully Implemented in LIG Nex1's Defense Operations
- Automated Document Verification for DAPA* Submissions
- Meets Security Standards Required by ADD**

* Defense Acquisition Program Administration
** Agency for Defense Development

Blockchain-Secured Contracts Beyond Digital Limits

Enables secure contract creation and verification, both online and offline.

The screenshot shows a mobile app interface for creating a contract. At the top, there's a progress bar with six steps: STEP 1 Contract Selection, STEP 2 Draft Full Text (active), STEP 3 Review Main Text and Attachments, STEP 4 Request for Confirmation, STEP 5 Sign Contract, and STEP 6 Contract Completion. Below the progress bar, the title is 'Standard Subcontract Agreement for Information System Maintenance - Full Text'. The form includes fields for Contract Title, Contract Period (2024-03-28 to 2025-03-28), and Contract Amount (USD) (\$20,000,000 including VAT). A table lists payment terms: Advance Payment (20%, \$4,000,000, 2023-03-28, Bank Transfer), Interim Payment (50%, \$10,000,000, 2023-11-28, -), and Final Payment (30%, \$6,000,000, 2024-03-28, -). Below the table is an 'Add Installment' button. Further down, there are input fields for Late Interest Rate, Delay Penalty Rate, Delivery Date/Location, Inspection Criteria Methods, Defects Liability Period, and Price Adjustment. At the bottom are 'Exit', 'Back', and 'Next' buttons.

Defense & Industrial

Ideal for secure facilities, remote sites, and defense or industrial use.

Finance & Healthcare

Designed for high-security environments such as defense, finance, and healthcare.

Government & Law

Immediately applicable across construction, manufacturing, government, and legal sectors.

Network-Free Smart Contracts

Securely stores smart contract results without internet access. Ideal for secure facilities, remote sites, and defense or industrial use.

Military-Grade Key Security

AES and SHA encryption safeguard all signing keys, making it ideal for defense, finance, and healthcare.

Pure Contract Realizes the DoD's Vision for a Tamper-Proof and Trusted Infrastructure.

Care Powered by Blockchain. Trust Built on Proof

A pet healthcare platform connected
through digital identity & blockchain

ONE PLATFORM. TOTAL CARE.

Powered by Pure Chain

Decentralized Storage

Securely store pet medical records and certificates without a central server using IPFS-based decentralized storage.

Smart Contract Integration

Automatically record medical treatments on the blockchain via smart contracts.

Multi-Clinic Compatibility

Access and verify records through a digital ID, enabling seamless medical data integration across clinics.
